Education

University of Southern California — Aug 2024 – May 2026
Master of Science in Computer Science — *GPA: 3.96*

DJ Sanghvi College of Engineering, University of Mumbai — Dec 2020 – May 2024
B.Tech in Computer Engineering — *CGPA: 3.78*

Experience

Easely Dunn Productions — July 2026 – Present
Software Engineer — *Remote, United States*

- Built asynchronous OCR pipeline with Go, Qwen3-VL, and AWS S3/SQS, using Claude Code to improve veterinary report extraction accuracy by **25%**
- Developed two-sided veterinary platform with Django, PostgreSQL, and Next.js, implementing JWT/RBAC for secure access to **1,000+** veterinary reports
- Instrumented Grafana monitoring and Redis caching, reducing API latency by **30%** and improving production issue detection

Frictionless Intelligence — Feb 2026 – May 2026
Software Engineering Intern — *Remote, United States*

- Shipped **4** production features for an AI startup intelligence platform using TypeScript, Next.js, and GraphQL, accelerating delivery by **45%** through Claude Code and GitHub Copilot agentic workflows
- Deployed and monitored microservices on AWS using Terraform and Docker/Kubernetes, with CloudWatch dashboards serving **2,000+** startups and **15K+** investor accounts
- Built real-time event pipelines with Kafka and PostgreSQL to score startups across **91 dimensions**, cutting investor diligence report generation to under **3 minutes**

University of Southern California (SCEC) — June 2025 – May 2026
Software Engineer, Student Worker — *Los Angeles, CA*

- Rebuilt public-facing websites with Next.js and React.js using Claude Code to accelerate boilerplate and routing, improving load times by **40%** and site visits by **25%**
- Migrated legacy PHP backend to scalable Node.js REST APIs on AWS using GitHub Copilot to accelerate endpoint generation, enabling **3x faster** data retrieval
- Automated content deployment pipelines with AWS S3 and Lambda, reducing manual updates by **80%** and enabling non-technical teams to publish independently

LifeSizeAgent AI — Mar 2025 – June 2025
AI Software Engineering Intern — *Remote, United States*

- Built conversational AI system using Python, LangChain, and Ollama LLMs with RAG architecture and ChromaDB vector DB, working with ML leads to define evaluation benchmarks and reach **95%** query accuracy
- Developed full-stack interface with React and FastAPI, running code reviews on **10** REST endpoints used by **50+** users, improving responsiveness
- Created MLOps infrastructure with automated configuration management, reducing deployment time by **70%** and enabling zero-downtime updates

Pro Thoughts Solutions — June 2023 – Dec 2023
Data Science Intern — *Mumbai, India*

- Implemented Random Forest and AdaBoost models in an Agile environment, collaborating with project managers to define model requirements and achieve **15%** improvement in project workflows
- Designed LSTM networks with TensorFlow for project delay forecasting, reducing prediction errors by **37%** and improving risk assessment accuracy to **89%**
- Processed **50K+** monthly data points with SQL, NumPy, and Pandas; generated **12** automated PowerBI dashboards, reducing reporting time by **40%**

Technical Skills

Languages & Frameworks: Python, Go, JavaScript/TypeScript, SQL, React.js, Next.js, Node.js, FastAPI, Django
AI/ML: LangChain, RAG, Qwen3-VL, PyTorch, MLflow
Cloud & Data: AWS (S3, SQS, Lambda, EC2), Docker, Kubernetes, Terraform, Kafka, PostgreSQL, Redis

Projects

BuyMore | *Python, React.js, Pinecone, FastAPI, Falcon 7B LLM* — GitHub

- Built scalable e-commerce platform with AI outfit generator and personalized recommendations via Pinecone vector search and fine-tuned Falcon 7B, boosting engagement by **20%**
- Developed automated ETL pipeline with Selenium, NLP, and embedding search for real-time trend analysis, reducing manual curation time by **70%**

FinanceGuru | *Python, Django, spaCy, XGBoost* — GitHub

- Trained XGBoost on transaction data, improving fraud detection accuracy by **28%** and cutting false positives by **15%** via real-time scoring pipelines
- Integrated spaCy NLP categorization with ML in a Django backend, delivering personalized insights via REST APIs and boosting retention by **18%**

Emissions Predictor | *Python, PyTorch, MLflow, PySpark, AWS* — GitHub

- Built LSTM-with-attention forecasting pipeline in PyTorch, improving CO_2 emissions forecast accuracy by **22%** for real-time policy planning
- Optimized distributed processing with PySpark on AWS to handle **100M+** records, cutting query execution times by **65%** via MLflow-tracked CI/CD workflows
